

About Community DNS:

Community DNS Ltd is a company based in the UK, with offices in Japan and USA. Community DNS is part of a larger corporate group which has a combined staff of over 100 skilled programmers, and trained customer service representatives ready to assist registry customers on a 24/7 basis.

Our Customer Support teams have won awards for their service from Internet Service Provider associations around the world, such as the UK's ISPA, for Best Consumer Customer Support.

We have a proven track record for software and technology systems and innovation since 1994, including as a pioneer of registry and registrar systems for TLD registries and the DNS along with sophisticated database and communication management systems used throughout the world by private and governmental organizations.

To ensure Community DNS meets Industry needs and requirements, an Advisory Group forum, is open to participating TLD Registry Managers for the exchange of information and advise on Service Level targets. feedback@CommunityDNS.eu

Community DNS is currently implementing an aggressive roadmap for the extension of its network of resolution servers, using Anycast IP addressing to collocation centers located near key exchange points throughout the world. This roadmap, currently provides service in 7 locations around the world, with more to be implemented over the coming 12 month period, providing TLD registries with a footprint for traffic flow and resolution unmatched in the industry today.

DNS professionals are invited to test this incredible DNS resolution platform, with no obligations and at no cost by visiting Community DNS at www.communitydns.eu.

As at 1st May 2007 we had 104 TLDs (ccTLD, gTLD and ENUM) on the testbed platform, representing 91million domain names and your TLD is warmly invited to evaluate this unique service. Simply register, and AXFR your zone then it's live!
